In the Abstract:

Please substitute the following annotated abstract for the original abstract:

The triggering method comprises ~~examining~~ recording a SIP ~~response~~ request message received by a S-CSCF ~~according to a set of response Filter Criteria (rFC), and~~ subsequently ~~recording~~ examining a corresponding SIP ~~request~~ response message received by the S-CSCF according to a set of response Filter Criteria (rFC), and re-issuing the SIP request message to an application server designated by the rFC if the corresponding SIP response message matches the Service Point Triggers (SPTs) of one of the rFC.
